The invention relates to an isolated polypeptide, comprising at least 25 contiguous amino acids of a human caspase recruitment domain (CARD)-47, human CARD-42 or murine CARD-41 (all splice variants of CARD-4)

contiguous amino acids of a human caspase recruitment domain (CARD)-47, human CARD-42 or murine CARD-41 (all splice variants of CARD-41)

colypeptide. Also included is an isolated fusion protein, comprising the CARD polypeptide is useful in screening assays, colypeptide. The CARD polypeptide is useful in screening assays, catection assays (e.g. chromosomal mapping, tissue typing and forensic biology), predictive medicine (e.g. diagnostic assays, prognostic assays, conjocing clinical trials and pharmacogenomics), and in therapeutic and prophylactic treatments (in diseases associated with apoptotic call death e.g. cancers, autoimmune disorders (e.g. systemic lupus erythematosus and immune related glomerulonephitatis), viral infections, AIDS (acquired immunodeficiency syndrome), neurological disease (e.g. Alzheimer's disease, Parkinson's disease, amyotrophic lateral sclerosis, retinitis dismentosa, spinal muscular atrophy and cereballar degeneration), heamatological diseases (e.g. anaemia, neutropaenia and myelodysplastic syndromes), myocardial infarction and stroke). The CARD polypeptide is useful as bait protein in a two-hybrid assay or three hybrid assay to identify other proteins, which bind to or interact with other CARD conteins, ABDS (accepted on chromosome 7. The present sequence is a human care care and an enterpresent sequence is a human care care and care ca
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     432

This invention relates to two novel genes CARD-3 and CARD-4 (caspase recruitment domains), which are mediators of apoptosis and are useful in the identification of compounds that modulate apoptosis. Specifically, CARD-3 (also known as RIPZ, RICK and CARDIAK) is known to be a mediator. of p75 (a member of the tumour necrosis factor (TNF) family), and is believed to provide the switch for cell survival and cell death decisions mediated by this p75 neutrophin receptor. Accordingly these genes, and the proteins encoded thereof, are linked to certain disorders associated with an increased number of cells surviving and proliferating when apoptosis is inhibited. These include cancer, autoimmune disorders e.g. systemic lupus and immune mediated glomerulonephritis, viral infections such as those caused by the herpesvirus, neurological disorders such as retinitis pigmentosa, haematologic diseases including chronic neutropenia, as well as myocardial infarction and strokes. The present compound alters the binding of CARD-3 to p75, which comprises measuring the death domain of p75, which comprises measuring the binding of a polypeptide containing the presence and absence of the test compound, and determining is placered. This polypeptide is the human CARD-3 protein sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Disclosure; Fig 1; 40pp; English

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 27,

Patent No. 6348573

Patent No. 6348573

Patent No. 6348573

APPLICANT: INFORMATION:
APPLICANT: Indhara, Nachiro
APPLICANT: Inchara, Nachiro
APPLICANT: Expension: Compositions and METHODS FOR IDENTIFYING APOPTOSIS
TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR IDENTIFYING APOPTOSIS
TITLE OF INVENTION: SIGNALING PATHWAY INHIBITORS AND ACTIVATORS
FILE REFERENCE: UM-03333

CURRENT APPLICANION NUMBER: US/09/069,023A

CURRENT FILING DATE: 1998-04-27

NUMBER OF SEQ ID NOS: 38

SOFTWARE: Patentin Ver. 2.0
TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR IDENTIFYING APOPTOSIS TITLE OF INVENTION: SIGNALING PATHWAY INHIBITORS AND ACTIVATORS FILE REFERENCE: UM-03333 CURRENT APPLICATION NUMBER: US/09/069,023A CURRENT FILING DATE: 1998-04-27 NUMBER OF SEQ ID NOS: 38 SOFTWARE: PATENT VET. 02: 2.0
                                                                                                                                                                                                                                                                                                                            .

                                                                                                              Sequence 1, Application US/09069023A
| Sequence 1, Application US/09069023A
| Patent No. 6346573
| GENERAL INFORMATION:
| APPLICANT: Nunez, Gabriel
| APPLICANT: Inohara, Naohiro
| APPLICANT: Koseki, Takeyoshi
| TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR IDENTIFYING APOPTOSIS
| TITLE OF INVENTION: SIGNALING PATHWAY INHIBITORS AND ACTIVATORS
| FILE REFERENCE: UM-03333
| CURRENT APPLICATION NUMBER: US/09/069,023A
| CURRENT PAPLICATION NUMBER: 1998-04-27
| NUMBER OF SEQ ID NOS: 38

Patent No. 6369196

GENERAL INFORMATION:

APPLICANT: Bertin, John

TITLE OF INVENTION: AND USES THEREOF

FILE REFERENCE: 07334/118001

CURRENT APPLICATION NUMBER: US/09/245,281

CURRENT FILING DATE: 1999-02-05

BEARLIER APPLICATION NUMBER: US 09/207,359

EARLIER PELICATION NUMBER: US 09/207,359

EARLIER PILING DATE: 1998-06-17

FEARLIER APPLICATION NUMBER: US 09/099,041

EARLIER PILING DATE: 1998-06-17

MUMBER OF SEQ ID NOS: 44

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                1206

US-10-105-931-2

Sequence 2, Application US/10105931

Publication No. US20020150987A1

GENERAL INFORMATION:

APPLICANT: Bertin, John

TITLE OF INVENTION: PROTEIN FAMILY AND USES THEREOF

FILE REFERENCE: 07334-076001

CURRENT APPLICATION NUMBER: US/10/105,931

CURRENT APPLICATION NUMBER: 09/099,041

PRIOR FILING DATE: 1998-06-17

PRIOR FILING DATE: 1998-06-17

PRIOR FILING DATE: 1998-02-06

NUMBER OF SEQ ID NOS: 37

SOFTWARE: FastSEQ for Windows Version 4.0 '

SEQ ID NO 2

LENGTH: 540

TYPE: PRI

TYPE: PRI

Miranda protein - fruit fly (Drosophila melanogaster)
C;Species: Drosophila melanogaster
C;Species: Drosophila melanogaster
C;Date: Jun-1999 #sequence\_revision 22-Jan-1999 #text\_change 17-Nov-2000
C;Accession: T00029
R;Ikeshima-Kataoka, H; Skeath, J.B.; Nabeshima, Y.; Doe, C.Q.; Matsuzaki, F.
Nature 390, 625-659, 1997
A;Title: Miranda directs Prospero to a daughter cell during Drosophila asymmetric divisic
A;Reference number: Z14067; MUID:98065952; PMID:9403694

Submitted to the EMBL Data Library, February 1998
A;Description: The sequence of C. elegans cosmid K02D7.
A;Reference number: Z21259
A;Reference undber: Z21259
A;Reference poly
A;Reference DNA
A;Molecule type: DNA
A;Residues: 1-692 < DUZ
A;Residues: 1-692 < DUZ
A;Residues: 1-692 < DUZ
A;Residues: BMBL:AF045645; PIDN:AAC02606.1; GSPDB:GN00022; CESP:T21D12.7
A;Experimental Bource: strain Bristol N2; clone K02D7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  127 IAQQWIQSKREDIVNQMTEACLNQSLDALLSRDLIMKEDYELVSTKPTRTSKVRQLLDTT 186
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A;Status: preliminary; translated from GB/EMBL/DDBJ

         K->A: ABOLISHES KINASE ACTIVITY.
K->M: REDUCES FAS-MEDIATED APOPTOSIS.
                                                                                                                                                                                                                                                                                                    SUBCELLULAR LOCATION: Cytoplasmic (Probable).
TISSUE SPECIFICITY: Detected in heart, brain, placenta, lung, peripheral blood leukocytes, spleen, kidney, testis, prostate, pancreas and lymb node.
                                                                                                                                                                                                                                                                                                                                                         PTM: Autophosphorylated.
SIMILARITY: Belongs to the Ser/Thr family of protein kinases.
SIMILARITY: Contains 1 CARD domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             GO; GO:0004674; F:protein serine/threonine kinase activity; TAS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       28-FEB-2003 (Rel. 41, Last sequence update)
10-OCT-2003 (Rel. 42, Last annotation update)
Receptor-interacting serine/threonine protein kinase 2 (EC 2.7.1.37).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    TABLE TO STATION ACTIVATES PRO-CASPASE-1 and pro-CASPASE-8. Potentiates CASP-8-mediated apoptosis. Activates NF-kappaB (By similarity).

-!- CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
-!- SUBBUIT: BINGS to CFFAR/CLARP and CASP1 via their CARD domains.
-!- SUBBUIT: BINGS to CFFAR/CLARP and CASP1 via their CARD domains.
-!- RAF6. May be a component of both the TNFRSF1A and TNRFSF5/CD40 receptor complex (By similarity).
-!- SUBCELLULAR LOCATION: Cytoplasmic (Probable).
-!- FUM: Autophosphorylated (By similarity).
-!- SIMILARITY: Belongs to the Ser/Thr family of protein kinases.
-!- SIMILARITY: Contains 1 CARD domain.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               -I- FUNCTION: APOPTOTIC SUPPRESSOR. THE BIR MOTIFS REGION INTERACTS WITH THE RECEPTOR ASSOCIATED FACTORS 1 AND 2 (TRAFI AND TRAF2) TO FORM AN HETEROMERIC COMPLEX, WHICH IS THEN RECRUITED TO THE TUMOR NECROSIS FACTOR 2 (TNFR2).
-I- SUBUNIT: Interacts with SMAC and with PRSS25; these interactions inhibit apoptotic suppressor activity.
-I- SUBCELLUAR LOCATION: Cyroplasmic (Potential).
-I- TISSUE SPECIFCITY: PRESENT IN MANY FETAL AND ADULT TISSUES.
MAINLY EXPRESSED IN ADULT SKELETAL MUSCLE, THYMUS, TESTIS, OVARY, AND PANCREAS, LOW OR ABSENT IN BRAIN AND PERIPHERAL BLOOD
                                                                                                                                                                                                                                                                                                                                                                                STRUCTURE BY NMR OF 266-363.

SIMILARITY: Contains 3 BIR repeats.
MILARITY: Contains 1 CARD domain.
SIMILARITY: Contains 1 RING-type zinc finger.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          InterPro; IPR001370; BIR.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Genomics 46:495-503(1997).

Genomics 46:495-503(1997).

-:-FUNCTION: APOPTOTIC SUPPRESSOR. THE BIR MOTIFS REGION INTERACTS

WITH TWE RECEPTOR ASSOCIATED FACTORS 1 AND 2 (TRAF1 AND TRAF2) TO
FORM AN HETEROMERIC COMPLEX, WHICH IS THEN RECRUITED TO THE TUMOR

NECROSIS FACTOR RECEPTOR 2 (TWRE2).

-:-SUBGNUT: Interacts with SMAC and with PRSS25; these interactions
inhibit apoptotic suppressor activity (By similarity).

-:-SUBCELLULAR LOCATION: Cycoplasmic (Potential).

-:-SUBCELLULAR LOCATION: Cycoplasmic (Potential).

-:-TISSUE SPECIFICITY: Expressed in heart, brain, spleen, lung,
liver, skeletal muscle, kidney and testis.

-:-SIMILARITY: Contains 3 BIR repeats.

-:-SIMILARITY: Contains 1 CARD domain.
                                                                                                                                                        SEQUENCE FROM N.A., AND PARTIAL SEQUENCE.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The complete sequences of unidentified human genes. XV.
The complete sequences of 100 new cDNA clones from brain which code
for large procedus in vitro.";
DNA Res. 6:337-345(1999).
-!- FUNCTION: Poor transcriptional factor which uses the canonical
single or multiple CARG boxes DNA sequence. Acts as a cofactor of
serum response factor (SRP) with the potential to modulate SRF
target genes (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Eukaryota, Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
